Cultural Awareness for Working in the Arctic

Sheyna Wisdom, M.S.

General Manager of Fairweather Science LLC

Conducting research successfully in the Arctic requires an understanding of the many cultures and traditional ways of life throughout the region.

In order to work effectively in the Arctic Alaska, it is essential to consider respect for indigenous people, understand cultural differences, and ensure all personnel understand cultural issues and land access rights. Recognizing there is a need for training opportunities for those coming to work in the Arctic for the first time, Fairweather Science LLC has developed a program to introduce scholars and researchers to important historical, environmental, cultural, and subsistence aspects of the North Slope.

Related seminars, sponsored by the UNH NRESS PhD program (2:30 - 3:30, James G46)

Wed, Nov 7th Preparing for Surprises, Dr. Radley Horton, Columbia University

Wed, Nov 14th Understanding the Terrestrial Arctic Water and Carbon Cycle and the Impacts of Climate Warming, Dr. Michael Rawlins, UMass Amherst

Wed, Nov 28th Developing a Climate Adaptation Baseline for Wabanaki Tribal

Nations: Diplomacy, Research Methods and Priorities, Dr. Darren Ranco, University of Maine
